- DX insert HC-4 available
- IC electret insert available
- Fully adjustable boom
- Earphone - 1/4in stereo jack
- Mic - 3.5mm plug (matches AD-1 adaptors)
- Soft Touch PTT

The new PRO SET QUIET PHONE (PSQP) is revolutionising the standard set by the PRO SET for contest and DX operation.

Using the same ambient noise reduction technology as in the 'Quite Phones' this new system allows operators to enjoy quieter communications in noisy environments. This can make difficult operation a lot easier. The outside ambient noise is reduced by 15dB with the -3dB point at 400Hz. In addition the PSQP also has speaker phase reversal, a feature first introduced on the PROSET PLUS headset.

There are three versions of the PSQP depending on the microphone insert provided with the headset. The famous HC-4 for DX / contest working, the HC-5 standard insert for general communications and the special IC electret insert for Icom rigs.

Connected in-line with the PRO SET is a hand controller which houses two AAA batteries plus two switches, one for noise cancelling and the other for speaker phase reversal.

Comfort is assured with the large soft leatherette earpads plus the supplied two washable cotton pad covers which helps to make the leatherette earpads much smoother and cooler to wear during contest operations.

To use with a transceiver, a Heil adaptor AD-1 interface lead is required, suitable for the rig. The PSQP is fitted with a soft touch PTT switch on the hand controller but a footswitch such as the FS-2 can also be used if required through the AD-1 interface lead.

PRO SET QUIET PHONES are contained in a presentable black soft leatherette case, which protects them whilst being transported and to store them when not in use.
