## MFJ-269

WATERS & STANTON

### DIGITAL ANTENNA ANALYSER

- Frequency Coverage 1.8-4, 4-10, 10-27, 27-70, 70-114, 114-170, 415-470MHz
- Antenna Analyser
- Frequency Counter
- SWR & Impedance or SWR Bargraph
- VSWR Meter • Signal Generator
- LCD readout, analogue meters
- Connectors: N-socket (Ant), BNC (Counter)
- Supply: AA x 10 Cells (not supplied) or ext. 12V DC
- Size 103 x 173 x 60mm
- Weight 750g

The MFJ-269 is now better than ever, with the inclusion of a battery cover. Instead of undoing 8 screws to release the case, you only need to undo 2 screws and replace the batteries.

The MFJ-269 is a very useful tool for radio engineers, radio amateurs or any one that needs to take measurements in the field. It extends into the UHF region which permits the design and checking of UHF antennas previously not possible with the MFJ-259B. Can also be used as a frequency counter and signal generator. The instruction manual indicates the many other uses the MFJ-269 can be made to cover with simply made external devices.

Other features include a backlit LCD readout which displays extra information and two analogue meters very useful for reading SWR and Impedance readings. The MFJ-269 is fitted with an N-socket for the antenna socket and BNC for the Frequency Counter.
